

Fund Objective

The objective of the portfolio is to provide attractive risk adjusted returns to the investors, by investing across a wide range of assets, both locally and internationally. The portfolio will avoid unnecessary, or diversifiable, macroeconomic risk and aims to earn the available risk premiums expected from the various asset classes over the long-term.

Fund Strategy

This is an actively managed fund which invests in local and international asset classes. The fund may include participatory interests of collective investment schemes, listed and unlisted financial instruments (derivatives), unlisted forward currency, interest rate and exchange rate swap transactions for efficient portfolio purposes. The Manager shall be permitted to invest on behalf of the portfolio in offshore investments as legislation permits.

To maximise returns for investors, exposure to asset classes varies while the fund can invest up to 75% in equities. The fund is Regulation 28 compliant.

Why Choose This Fund?

- The portfolio is managed to avoid unnecessary macro-economic risk, so should have less volatility than other multi asset high equity funds.
- We try to limit erratic returns by aiming to earn the available risk premiums expected per asset class over the long term.
- Regulation 28 compliant.

TER	1.19
TC	0.75
TIC	1.94
TER Measurement Period	02 May 2017 - 30 September 2018

Total Expense Ratio (TER) is the percentage value of the Financial Product that was incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. The TER and Transaction Costs cannot be determined accurately because of the short life span of the Financial Product. Calculations are based on actual data where possible and best estimates where actual data is not available.

Transaction Cost (TC) is the percentage value of the Financial Product that was incurred as costs relating to the buying and selling of the assets underlying the Financial Product. Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Total Investment Charges (TER + TC) is the total percentage value of the Financial Product that was incurred as costs relating to the investment of the Financial Product.

Risk Profile

Moderate Aggressive

In this portfolio, capital growth is important and results in a higher allocation to equities. The portfolio may display capital fluctuations over the shorter term, however, volatility levels should be lower than a pure equity fund. While diversified, this portfolio is tilted more towards equities and other risky asset classes to ensure risk adjusted returns.

Glossary Terms

Active Stock-picking Process

This is when asset managers actively and tactically vary their stock selections based on economic and market data, and fundamental valuations, etc. This should lessen an investor's exposure to declining markets and helps preserve capital.

Annualised Returns

Annualised return is the weighted average compound growth rate over the period measured.

Asset Allocation

The income that is generated from an investment and given to investors through monthly, quarterly, bi-annual or annual distribution pay-outs.

Capital Growth

Capital growth is the profit made on an investment, measured by the increase in its market value over the invested amount or cost price. It is also called capital appreciation.

Distributions

Derivatives are instruments generally used as an instrument to protect against risk (capital losses), but can also be used for speculative purposes. Examples are futures, options and swaps.

Derivatives

Liquidity The ability to easily turn assets or investments into cash.

Liquidity

Information Ratio

The Information Ratio measures the market risk-adjusted performance of an investment or portfolio. The greater a portfolio's Information Ratio, the better its risk-adjusted performance has been compared to the market in general.

LISP (Linked Investment Service Provider)

A Linked Investment Service Provider is a financial institution which packages, distributes and administers a broad range of unit trust based investments. Any investment made through these products gives an investor a single point of entry into a selection of different investments.

Maximum Drawdown

The maximum drawdown measures the highest peak to trough loss experienced by the fund.

Money Market Instruments

A money market instrument is a low risk, highly liquid, short-term (one year or less) debt instrument, issued by financial institutions or governments, that tend to have lower returns than high-risk investments.

Regulation 28

Regulation 28 of the Pension Funds Act sets out prudent investment limits on certain asset classes in investment funds. It applies specifically to investments in Retirement Annuities and Preservation Funds. The allowed maximum exposures to certain asset classes is: 75% for equities; 25% for property; 25% for foreign (offshore) and 5% African assets.

Sharpe Ratio

The Sharpe Ratio measures total risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio and indicates whether a portfolio's returns are due to excessive risk or not. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Standard Deviation

Standard deviation (also called monthly volatility) is a measure of how much returns on an investment change from month to month. It is typically used by investors to gauge the volatility expected of an investment.

Undervalued Equity Stocks/ Investing in Neglected Global Equities

This is a strategy of selecting shares that trade for less than their intrinsic values. Value investors actively seek stocks that they believe the market has undervalued. They believe the market overreacts to good and bad news, resulting in stock price movements that do not correspond with the company's actual long-term fundamentals. The result is an opportunity for value investors to profit by buying when the price is deflated.

Additional Information

All reasonable steps have been taken to ensure the information on this MDD is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision. The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available from the Manager, Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. The portfolio may invest in participatory interests of other unit trust portfolios. These underlying funds levy their own fees, and may result in a higher fee structure for our portfolio. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The Manager may borrow up to 10% the market value of the portfolio to bridge insufficient liquidity. The fund may from time to time invest in foreign instruments which could be accompanied by additional risks as well as potential limitations on the availability of market information. Investments in foreign instruments are also subject to fluctuations in exchange rates which may cause the value of the fund to go up or down. The fund may invest in financial instruments (derivatives) for efficient portfolio management purposes. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. Management of the portfolio is outsourced to Denker Capital (Pty) Ltd, (FSP) Licence No. 47075, an Authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002. Sanlam Collective Investments (RF) (Pty) Ltd retains full legal responsibility for the co-named portfolio. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme. Sources of Performance and Risk Data: Morningstar Direct, INET BFA and Bloomberg. The risk free asset assumed for the calculation of Sharpe ratios: STEFI Composite Index. The highest and lowest 12- month returns are based on a calendar year period over 10 years or since inception where the performance history does not exist for 10 years. Obtain a personalised cost estimate before investing by visiting www.sanlamunitrustsmdd.co.za and using our Effective Annual Cost (EAC) calculator. Alternatively, contact us at 0860 100 266.

Portfolio Manager Quarterly Comment

Quarter to December 2018

Market review

In US dollars, equity markets had a tough quarter. Unfortunately South Africa continued to lag; outperforming only a handful of emerging market equity indices. The MSCI All Country World equity index closed lower. Surprisingly, emerging markets performed relatively better.

Finance Minister, Nhlanhla Nene resigned and was replaced by previous central bank governor Tito Mboweni. The markets responded with some enthusiasm to the appointment. Mr Mboweni then delivered the Medium Term Budget Policy Statement (MTBPS) a few short weeks later. Salient features include downwardly revised growth forecasts, slippage on projected deficit and debt targets over the medium term – a result of lower revenue projections and a reprioritisation of public spending (while maintaining the expenditure ceiling).

The South African Reserve Bank's (SARB) Monetary Policy Committee (MPC) raised the repo rate by 0.25% highlighting rand depreciation, electricity price increases and higher international oil prices. Markets expect the MPC to raise the repo rate to 7.5% over the next 18-24 months. S&P maintained a stable outlook and affirmed South Africa's local currency debt rating.

International trade tensions remained elevated and data releases indicated that Chinese growth might be slowing.

Performance

The fund was launched on 2 May 2017. Since the fund's inception the FTSE/JSE Capped All Share Index delivered 2.0%, domestic property (represented by the FTSE/JSE SA listed property index) declined 14.6% and SA cash paid 12.5% in rand. Marginal rand weakness (since inception) - the rand/dollar exchange rate deteriorated from R13.34 to R14.35, representing a decline of 7.6% - assisted the performance of offshore assets. The S&P500 in rand closed 12.8% higher while the MSCI EM lagged modestly gaining 5.1%.

Over the last quarter of 2018, only bonds and cash assets – onshore and offshore – delivered positive returns to the rand investor.

As we wrote at the end of the previous quarter, markets have provided little opportunity for outsized returns.

Owning assets exposed to different macro-economic risks and rewards is how one achieves diversification. This means that not all assets held by the fund can deliver returns in the same environment. A diversified portfolio means reduced volatility and capital stability; one of the main aims of the fund.

Noteworthy allocations

- We remain committed to maintaining the 25% offshore allocation.
- We have no intention of acquiring long dated developed market debt. We prefer to roll shorter dated cash investments which offer lower returns, but reduce the risk of capital losses.
- We have again reduced our underweight equity allocation domestically. We continue to buy exposure to SA Inc and emerging markets following recent poor performance.

Outlook

In the absence of major regulatory reform, South Africa will follow where global markets lead.
